Graduates of the BPharm will be able to¹:

| Disciplinary Knowledge & Practice | Demonstrate broad scientific knowledge across chemical, biological, pharmaceutical and behavioural sciences, and its appropriate application in delivering culturally competent, patient-centred care.  
Apply scientific knowledge across a range of settings, levels, and sectors, demonstrating foundational skills and understandings in the role of pharmacists and the pharmaceutical sciences in optimising medicines to enhance patient and population health outcomes and wellbeing. |
|---|---|
| Critical Thinking | Critically appraise theory, literature and practice, applying disciplinary knowledge to make informed decisions, including evaluating health threats, systems and trends from evidence-based perspectives.  
Critically reflect on one’s social, cultural and professional views and experiences in healthcare settings and in relation to health systems and health policy. |
| Solution Seeking | Use disciplinary knowledge within multifaceted contexts to formulate appropriate, feasible solutions to complex problems at patient and population health levels, including in contexts where knowledge is often incomplete and ambiguous.  
Aim to reduce health inequities through focussing on improving health policy, professional practices and the health of individuals and communities. |
| Communication & Engagement | Collaborate and communicate sensitively and effectively across diverse audiences to promote health literacy for individuals, whānau, communities and health professionals.  
Apply appropriate communication styles, modes and technologies to enable shared decision making for improvements in health at personal and health systems levels. |
| Independence & Integrity | Practice pharmacy, and undertake health research and scholarly activity autonomously and reflexively, operating within the appropriate scope of practice in accordance with relevant legislation, and ethical principles.  
Engage in regular, honest self-reflection in professional settings to enhance personal and leadership development that grows resilience and promotes the wellbeing of self and others. |
| Social & Environmental Responsibilities | Interact in a culturally safe, mindful and competent manner, actively incorporating the principles of Te Tiriti o Waitangi in research, health and pharmacy practices with the aim of improving health outcomes for Māori and eliminating health inequities.  
Respect the values, practices and world views of individuals and cultural groups, showing an appreciation of human and cultural diversity, in the effective delivery of pharmacy services.  
Participate in building sustainable health networks and systems that can advocate for inter-professional, environmentally responsible and economically viable solutions towards medicines optimisation and improved health outcomes. |

¹ This draft document aligns to the University of Auckland’s 6 Themes in the new Graduate Profile introduced in 2017 across the university. It sits as an ‘overarching’ Embedded Graduate Profile that encompasses the more detailed elements in the existing BPharm Graduate Profile introduced in 2016.

BPharm Embedded Graduate Profile version 01/10/18
