1 GLOSSARY OF TERMS

Elective Advisor
A member of the University of Auckland Elective Committee who approves student elective choices, assesses Student and Supervisor reports, and conducts the end of the elective interview. The advisor is allocated a number of elective students to oversee their elective planning and is also part of elective review for some elective students.

Elective Supervisor
A person at the elective attachment site who is prepared to supervise a medical student during the whole or part of the ten-week elective period in the final year of the medical course. This is an honorary position.

Elective Associate
A person who will assist the Supervisor in the supervision of a medical student during the elective.

3 THE PHILOSOPHY

3.1 Definition
The elective is a quarter during your trainee intern Year 6 in which you have a free choice of activity - medical, paramedical or medico-social. A non-medical elective may only be undertaken under exceptional circumstances.

Students have a free choice of elective that is subject to approval by the appropriate Elective Advisor in advance.

3.2 Aims
- To provide you with an opportunity to explore some aspect of a chosen medical topic in depth.
- To encourage you to think about your future and to provide opportunity for contact with possible future vocational areas.
- To allow you to extend and consolidate knowledge in areas of interest and weakness.
- To enable you to round off your training through study of a topic not directly related to future vocation.
- To encourage initiative, social accountability, and a sense of responsibility with minimal direction.

3.3 Anticipated Results
- Students will have the opportunity to prove themselves in their own chosen field of endeavour.
- Facilitation of the transition from ‘student’ with no responsibility to ‘doctor’ with total responsibility.
- Students will at least partly formulate ideas about their future vocations.
- Closer relationships between students and staff.
- Upgrading of specific skills in the area of medicine that the student works during his or her elective.
- Enhancement of student’s general education.
- Deeper understanding and appreciation of different cultures and their health care needs.
- Enhanced appreciation of the interconnected endeavours of different health care professionals and the environments in which they work.

3.4 The Elective and the Graduate Learning Outcomes for the Medical Programme
The elective must also relate to the Graduate Learning Outcomes for the medical programme. While it is anticipated that you will work towards achieving a significant number of these, there will be three or four that you should particularly concentrate on for your personal elective. You will be asked to identify these, as part of the application process and provide evidence of how you have achieved these in your report and/or during interview at the completion of the elective.

3.5 The Nature of the Elective Scheme
The elective represents a mutual contract between your Supervisor and yourself and is subject to minimal interference by the Faculty.

The elective period is a prescribed part of the medical programme and as such must be accounted for. The elective activity must occupy ten weeks of the elective quarter.
4 YOUR ELECTIVE

Electives may be clinical, research project-oriented or simply designed to widen the students' experience in a particular sphere. In general, electives should be designed with some definite goal(s) in view. Your 10-week elective can be spent:

- at one site in one clinical speciality; or
- participating in research; or
- split into two 5-week clinical placements in different specialities in New Zealand; or
- split into an overseas placement with the remaining time on placement in New Zealand.

You will begin planning your Elective in Year 5 following release of the Year 6 Quarter allocation. You will then be invited to begin the process by initiating discussions with your elective advisor in July and submitting the year 6 Elective survey in August.

4.1 Split Electives

4.1.1 New Zealand Only Electives

Students have the option to split a 10-week elective into two 5-week clinical placements within New Zealand. The student has multiple options for the split configuration. It can be undertaken in the same speciality at different sites; in different specialities at the same or different sites; or split between DHB and non-DHB sites. Students should note:

1. 5-week placements are likely to be better able to be accommodated at clinical sites rather than a single 10-week placement.
2. You are able to split an Elective 5 + 5 weeks only.
3. No other split configuration will be accepted.
4. Research Electives and Research Projects with Dissertation must be 10 weeks and cannot be split.

Students are given the opportunity to indicate their preference for a 10-Week Elective or Split-Elective on the Elective Survey which will be released in early August.

4.1.2 Overseas Elective

Overseas electives have been approved for 2023. The following policy will apply for split-electives that include an overseas component:

1. Students must complete 10 weeks on Elective placement – if an international elective placement is of a duration less than 10 weeks – the student must complete the remaining weeks in New Zealand.
2. Electives can only be split into 2 placements (e.g. they can complete one 4-week placement overseas and one 6 week placement back in New Zealand but cannot complete two 4-week placements at overseas hospitals and one 2-week placement in New Zealand).

Because many overseas institutions offer elective periods of set duration students may split their overseas placement and New Zealand placement into two blocks of either 4/6, or 5/5 weeks with one block at an institution overseas and the remaining block in New Zealand. Splits of 8/2 may be approved but it can be difficult to generate a 2-week DHB placement in New Zealand so students who have found an 8-week placement overseas may need to self-generate a New Zealand placement for their remaining two weeks.

Students can arrange their overseas placements to start or conclude during vacation weeks that are adjacent to their quarter dates however the preference is that students complete any DHB placements in New Zealand during the scheduled quarter dates.

Students must be back in New Zealand in time to attend their next scheduled attachment (Clinical Imaging Week in most cases) and their Post Elective Interview.
4.2 NZ based GP Electives

If you wish to conduct a NZ based GP Elective, the Department of General Practice has requested students be referred to the Department to ensure the practice is suitable and that practices currently used for teaching are not being over committed and there is no impact on teaching. All students must contact the elective administrator Claudia Makgill (Claudia.makgill@auckland.ac.nz) before any contact is made with GPs or practices.

5 PLANNING YOUR ELECTIVE (Year 4)

Students should begin thinking about the elective in Year 4, ready for more specific action in Year 5. Do not leave the arrangement of your Elective until the last minute, the planning, approval and arrangements take much longer than you expect. Talk to current trainee interns or junior doctors who have done electives which interest you. Read Elective Reports from previous years for information and inspiration. Elective reports from 2005 onwards are available on Elective report database available via the MBChB Portal.

Talk to colleagues and friends who may have personal contacts with existing or possible supervisors. There is also an elective website that can provide information on how to organize and where to go for an elective. The website address is http://www.electives.net.

The University does not maintain a database of institutions or organisations that offer international electives for medical students. Elective advisors may be able guide students towards options of interest, but it is expected that students will identify and arrange their own international placements.

6 ELECTIVES

6.1 General

Approval will depend on the quality of the Elective proposal. A clear statement of aims and learning outcomes of the elective, nomination of a suitable Supervisor and confirmation from the Supervisor that they agree to supervise your elective is required in order to confirm your Elective proposal.

An overseas Elective is likely to be approved where it involves experience which is not readily available in New Zealand.

Electives in the South Pacific and the developing world are encouraged. Elective Reports from previous students provide particularly valuable information on these electives.

6.2 Overseas Electives

The following overarching policy will apply to overseas electives in 2023:

1. All travel and elective plans are tentative until after the year 5 Board of Examiners and year 5 compensatory time/remediation time is complete at the end of 2022
2. Students that are assigned a Directed Elective (DE) by the Year 5 Board of Examiners need to be present in New Zealand for the DE
3. Students must accept the risk and responsibility for any costs including those not covered by insurance e.g. associated with cancellation or delays to travel that come about from blanket quarantine or border closures following a directive by the New Zealand government or a foreign government.
4. Students will be responsible for any costs associated with MIQ or Self isolation
5. Neither the Faculty nor the University will reimburse students for any additional expenses incurred.
6. Students must follow the mandatory procedures for organising, authorising, booking and undertaking self-funded University student activity travel – this includes booking all travel through the University of Auckland Travel Management Company and using the
University of Auckland Insurance Coverage. All students must complete a Via application (full procedures can be viewed at University Student Activity Travel Procedures Links to an external site.)

7. Students who travel internationally for electives accept that their decision to travel may affect their ability to graduate in 2023.

8. Year 6 students will be required to achieve a clear pass in 2 of the 3 Progress tests in 2023 to graduate. Any student, including Quarter 4 students, with a fail or an aegrotat in test 1 or 2 for the year, will need to sit the third. Having to sit the third PT will not necessarily preclude Quarter 4 students going on elective overseas, if the test is online, but they will have to demonstrate that this is as near to fool-proof as possible and have an overseas Q4 elective approved in writing. Inability to be able to complete the third Progress Test, if required, may lead to a Fail grade in the Applied Science for Medicine Domain and a requirement to repeat the year.

9. Students must complete 10 weeks on Elective placement – if an international elective placement is of a duration less than 10 weeks – the student must complete the remaining weeks in New Zealand.

10. Electives can only be split into 2 placements (e.g. they can complete one 4-week placement overseas and one 6 week placement back in New Zealand but cannot complete two 4-week placements at overseas hospitals and one 2-week placement in New Zealand).

11. Overseas electives, even if split, must be under the jurisdiction of the same institution. (2 clinical specialities in one hospital, or in a base hospital and satellite hospital of the same university or DHb equivalent is permitted. Half an elective in Cardiff with the other half in Edinburgh, for example, is not permitted)

12. Students must be back in New Zealand in time to attend their next scheduled attachment (Clinical Imaging Week in most cases) and their Post Elective Interview.

6.3 Personal Risk

In general, the choice of elective destination is your decision, provided it meets academic requirements. Whilst the Faculty places no constraints on electives in any overseas countries, the political and health situation in some parts of the world can be volatile. This has become increasingly important when considering overseas destinations. You should discuss your proposed destination with your Elective Advisor and make every effort to check, through different sources, that the region of your planned elective will not place you under undue risk. The Elective Advisor or the Chair of the Elective Committee may decline to approve destinations which are considered unduly dangerous, and advise you to arrange an alternative elective. You should monitor potential problems up to the time of your departure and take all reasonable precautions to ensure your personal safety. At times, this may result in late cancellation of an elective.

Some issues to consider in your planning (please note this list is not exhaustive):

- Sexual assault
- Consensual sexual activity that carries risks
- Drug use
- Petty and violent crime
- Medical illness
- Trauma
- Internal conflicts
- Unwanted attention

The Faculty accepts no responsibility for the decision of the student as to the region chosen for the elective. Your personal safety while away is your responsibility. The Ministry of Foreign Affairs & Trade website must be watched both prior to and during your elective, and the student should act on any advice on health or safety concerns given by the Ministry. If you
find yourself in a situation where your personal safety is at risk, please contact the Elective Administration or Chair of the Elective Committee. Every endeavour will be made to assist you, but the University cannot take responsibility for your personal safety while you are away.

Useful web sites:

- [www.fco.gov.uk](http://www.fco.gov.uk) UK Foreign & Commonwealth Office – Travel Information
- [www.who.int/ith](http://www.who.int/ith) WHO International Travel & Health

An elective will not be approved if the following travel warnings for an area are given by the New Zealand Ministry of Foreign Affairs & Trade on their website:

**Do Not Travel:** Countries or parts of countries where we advise against all travel

**Avoid non-essential travel:** Countries or parts of countries where we advise against tourist and other non-essential travel

### 6.4 Personal Safety

If for any reason you feel unsafe on your elective you should immediately leave your elective. In consultation with the Chair of the Elective committee, an alternative elective will be arranged. In these circumstances you would not be required to perform additional elective time unless there were other reasons to consider such a requirement. It is important that your experiences are formally documented by you, and that Ms Claudia Makgill and the Chair of the Elective Committee are notified.

### 6.5 Health Risks

#### 6.5.1 COVID-19

International travel in the post COVID-19 world will not be the same as it was in 2019. There is an inherent risk to international travel that did not exist in 2019, and students must accept some of that risk themselves when planning to travel for study purposes. Students should note the following when making the decision about whether they will seek an international elective in 2023:

- There is no insurance cover for Alert level changes, blanket quarantine or border closures following a directive by the NZ Government or a foreign Government. Also not covered is a disinclination to travel in relation to the Pandemic.
- There is no cover for any MIQ/ self-isolation costs whatsoever in New Zealand or any other country.

Students must accept the risk and responsibility for any costs associated with cancellation or delays to travel that come about from blanket quarantine or border closures following a directive by the New Zealand government or a foreign government. Students will be responsible for any costs associated with MIQ or Self isolation. Neither the Faculty nor the University will reimburse students for any additional expenses incurred.

#### 6.5.2 HIV infection

In most parts of Africa between 5 - 50% of the population are infected with HIV. In Thailand and some other Asian countries approximately 1-10% are infected with HIV. The prevalence of infection in patients receiving medical care in these countries is likely to be much higher than in the general population. During your elective you may be exposed to a risk of acquiring HIV infection through sexual contact, inadvertent injury (e.g. accidental needle prick), or transfusion of blood in the event of a major injury, illness or surgery.

Caution on your part, to avoid exposure to potentially infectious blood and body fluids, whether by accident at work or by other routes away from work, is the most important means of preventing infection.

When you are planning your elective, you should ask your elective supervisor about the estimated prevalence of HIV infection in the patients you will care for during your elective, the
risk of accidental percutaneous exposure to blood during your clinical experience, and the availability of post-exposure prophylaxis if you suffer a significant exposure. You should then consider whether this information affects your decision to choose this elective.

Antiretroviral therapy is not always available in all elective sites. You may wish to consider taking a 5-day course of antiretroviral therapy with you, for immediate availability, should you be unfortunate enough to sustain a needle stick or other injury.

6.5.1.3 Advice for Use of PEP

Post Exposure Prophylaxis (PEP) is recommended to reduce the risk of acquiring HIV infection after injuries with a significant risk of transmitting infection.

There are no human trials that show how effective it is and no certainty about the best regimen. However, there are widely agreed recommendations such as those available at: http://www.cdc.gov/mmwr/preview/mmwrhtml/rr5011a1.htm

The decision to start PEP is usually based on an assessment of the risk of acquiring HIV infection from the injury. This risk is affected by the chance that the body fluid to which the injured person has been exposed contains HIV and the concentration of HIV in the body fluid. It is also affected by the nature of the injury and the expected amount of HIV containing body fluid entering the injured person’s body.

For example:

The risk is greatest when the body fluid is blood from a person with known untreated late HIV infection, and very much less when the body fluid is blood from a person with treated HIV infection or blood from a person who may not have HIV infection. The risk is greatest when the injury results in a large volume of blood entering the injured person’s tissues, and very much less when the injury results in blood contamination of unbroken skin, or sputum or saliva contamination of mucous membranes.

PEP is usually offered when the injury involves tissue exposure to blood from a person with known or suspected untreated HIV infection. PEP is not usually offered when the injury involves skin or mucous membrane exposure to body fluids other than blood or genital secretions or when the body fluid is from a person who is unlikely to have HIV infection.

Various two or three drug regimens have been recommended for PEP. Many authorities recommend a three drug regimen for significant injuries. One widely used regimen is Combivir (zidovudine 300mg plus lamivudine 150mg) one tablet twice a day, plus Kaletra (lopinavir 200mg plus ritonavir 50mg) two tablets twice a day. Another widely recommended regimen is Truvada (tenofovir 300mg plus emtricitabine 200mg) one tablet once a day, plus Isentress (raltegravir 400mg) one tablet twice a day. A wide variety of regimens are likely to be equally effective. It is not necessary for the regimen to consist of the same medications throughout the period of prophylaxis.

Grafton Pharmacy, 29 Park Road, have kindly offered to dispense five day PEP starter packs to be used by FMHS students in the event of an injury with risk of transmitting HIV infection while on an overseas elective. Please visit or contact them for current costs 09 307 1330. Students should choose between the two different regimens that Grafton Pharmacy have agreed to dispense before arranging a prescription from Dr Stephanie Crerar s.crerar@auckland.ac.nz, University Health and Counselling 09 373 7599 extn 89086.

Students who wish to obtain an HIV PEP starter pack should be aware that Grafton Pharmacy has kindly offered to provide the starter packs at a much reduced price. Students should NOT expect other pharmacies either to be able or willing to provide starter packs, nor that other pharmacies would charge the same reduced price as Grafton Pharmacy have offered.

Regimen 1  Approximate cost for 5 day starter pack $50
Combivir (zidovudine 300mg plus lamivudine 150mg) one tablet twice daily
plus Kaletra (lopinavir 200mg plus ritonavir 50mg) two tablets twice daily
Regimen 2  
**Approximate cost for 5 day starter pack $200**
Truvada (tenofovir 300mg plus emtricitabine 200mg) one tablet daily

plus

Isentress (raltegravir 400mg) one tablet twice daily

These two regimens have been chosen to allow students to choose between a relatively expensive and a much cheaper option. Both are expected to have very high efficacy in preventing HIV infection. Neither is expected to cause major adverse effects. The more expensive regimen (Truvada plus Isentress) is less likely to cause any adverse effects.

The PEP regimen should be started as soon as possible after the injury. Most authorities recommend starting within an hour or two of the injury if possible. Most suggest that there is likely to be little if any benefit if PEP is started more than 72 hours after the injury. In many situations it is therefore better to start PEP immediately and review the decision about whether to continue PEP in the next few days.

PEP should be continued for 28 days if it is considered that the risk of acquiring HIV infection from the injury is high. The PEP regimen can be changed dependent on drug availability and on other information such as the use of antiretroviral drugs by the person whose blood was the source of exposure.

PEP commonly causes significant adverse effects such as nausea, headache, abnormal taste, malaise. It does not cause any long-lasting adverse effects.

**Prior to departure on elective**

Decisions about whether to obtain a 5 day starter pack, and which pack to obtain, should be made in consultation with a physician from the University Health and Counselling Service. Please phone reception at 0800 698 427 option 2, and book a Doctor’s appointment for a HIV PEP starter pack for electives. You can also email the University Health and Counselling Service at uhcsgrafton@auckland.ac.nz.

**While on elective**

Decisions about whether to start, or continue to take PEP, after some potentially unsafe exposure to blood or other body fluids, should be made in consultation with a doctor experienced in the care of patients with HIV infection. This will almost always be a doctor working in the hospital where you are on elective, or some other local expert. If you wish to seek further advice you may contact Dr Mark Thomas, Auckland City Hospital mthomas@adhb.govt.nz, phone 64 (0)9 3797 440; mobile: 64 (0)21 41 27 27.

**Follow up after use of PEP**

It is important to have an HIV antibody test at about 6 weeks and 3 months after completion of the PEP. While waiting for these results you should use barrier precautions (consistent condom use) during sexual intercourse. You should seek medical advice if you develop an illness with fever, swollen lymph glands, rash, sore throat, etc.

**Prevention of exposure to HIV**

Remember that prevention is better than cure! Avoid situations that might lead to injuries with a risk of HIV transmission. Avoid dangerous travel that might lead to injuries requiring blood transfusion, avoid situations that might lead to violent assault or rape, avoid intervening in disorganised attempts to care for or control people who might have HIV infection.

**6.5.1.4 Tuberculosis**

Many hospitals and other health care environments in developing countries care for very large numbers of patients with tuberculosis. In many of these environments there is little or no effective infection control and health care workers, such as elective students, have a high risk of acquiring *Mycobacterium tuberculosis* infection. For instance, a study of health care workers in KwaZulu, South Africa, in 2006 found that 1% of health care workers developed tuberculosis disease each year. The incidence of newly acquired *M. tuberculosis* infection which had not
progressed to disease in these health care workers is likely to have been 10-100 times greater! An elective student working in such an environment for 8 weeks might have a 20% chance of acquiring *M. tuberculosis* infection.

Resistance of *M. tuberculosis* to the drugs that are commonly used to treat tuberculosis has increased rapidly in many developing countries. For example, in KwaZulu during 2006-2007, 20% of cases of tuberculosis were multi-drug resistant and 2% were extremely drug resistant. The rates of cure of tuberculosis due to drug resistant strains are considerably less than in fully sensitive strains.

Students contemplating electives in developing countries should be aware that they may have a significant risk of becoming infected with *M. tuberculosis*, and that people with *M. tuberculosis* infection have a 10% lifetime risk of this infection progressing to disease. Disease due to drug resistant strains may be very difficult to cure and may have short to medium term implications for the person's ability to work in a health care setting. Students who have a condition that affects their immunity, or who are treated with medications that suppress immune responses, should be especially cautious about choosing an elective with a high risk of exposure to patients with tuberculosis.

BCG vaccination has little or no efficacy in protecting adults against acquisition of *M. tuberculosis* infection. There is no effective antimicrobial prophylaxis.

Students who consider that they have been at risk of acquiring *M. tuberculosis* infection during their elective should have a Quantiferon Gold test performed 3 months after their return to New Zealand. Comparison with the results of the Quantiferon test performed during preclinical year 2 may help to determine whether *M. tuberculosis* infection has been acquired. Students whose Quantiferon Gold results indicate that they have acquired *M. tuberculosis* infection should be referred to a public health, or respiratory medicine or infectious diseases specialist for consideration of treatment of latent tuberculosis.

**STUDENTS RETURNING FROM COUNTRIES WHERE TUBERCULOSIS IS ENDEMIC SHOULD VISIT UNIVERSITY HEALTH SERVICE GRAFTON ON THEIR RETURN TO DISCUSS WHAT FOLLOW-UP TESTING IS REQUIRED. STUDENTS AT WCS (INCLUDING ROTORUA AND TAURANGA) SHOULD CONTACT RAEWYN WOODERSON FOR REFERRAL ADVICE.**

**6.5.1.5 Other infectious Diseases**

Electives in developing countries may place you at risk of a range of other infectious diseases such as malaria, typhoid fever, hepatitis A and yellow fever. You should consult student health or your general practitioner for advice about precautions to reduce these risks. You should especially consider malaria prevention, including regular prophylactic medications, vaccination against hepatitis A, and depending on your travel itinerary, yellow fever vaccination and Japanese encephalitis vaccination.

Students who are considering travel to high risk locations may wish to consult Dr Joan Ingram, an infectious disease physician with expertise in travel medicine phone (09) 524 6249 www.aucklandtravelmedicine.com or another travel medicine specialist.

**6.5.1.6 Other Health Risks**

Travel to unfamiliar places often results in deliberate or inadvertent exposure to a variety of health risks that include motor vehicle accidents, injuries resulting from dangerous activities such as climbing or diving, assaults from locals or other travellers, etc. Lack of familiarity with the local conditions, unwise use of alcohol or other intoxicants, and an enhanced appetite for risky behaviours, can all contribute to travellers placing themselves in dangerous situations. Students should review the elective reports from others who have visited the same regions and other sources of advice to reduce the chances of suffering injuries
NOTE: On return from elective all students will be sent a link to their university email to complete a confidential post health questionnaire. This will be discussed at the post elective interview.

7 PROJECTS DURING YOUR ELECTIVE

In general, completion of a clinical or basic research project will enhance the elective. Such projects are not compulsory although they are encouraged. A project may range from audit of a clinical experience, a small clinical research project to performing specific laboratory-based research. If research (other than audit) is planned, this will usually require ethical approval which will need to be arranged before commencing the elective.

Students undertaking a research project of any kind at a DHB should contact the site-coordinator for that DHB and advise them of the details of the research. The site-coordinators are responsible for all student activities on site and will ensure policy compliance for the research.

8 PLANNING YOUR ELECTIVE (YEAR 5)

Early in Year 5 students must begin to make more specific plans for their elective quarter.

Quarter Dates* There are 4 x 10-week elective blocks, one per quarter

1st Quarter early January to late February (10-week elective)
2nd Quarter early March to late April (10-week elective)
3rd Quarter middle of May to middle of July (10-week elective + 2-week vacation)
4th Quarter early August to early October (elective plus 1 week vacation)

*Specific dates for each quarter will be posted on Canvas at the beginning of Year 5.

The post-elective interviews will be conducted during the Medical Imaging Week for each quarter.

8.1 Elective organisation steps during Year 5

April Allocation survey for year 6 made available.
Late May Results from above survey advised by email.
June Elective Advisors allocated to students in early July. You will make contact with your supervisor to discuss your elective objectives and plans prior to the release of the Elective survey in September.

Failure to make contact with your Elective Advisor or complete Elective paperwork within a reasonable time frame (including the deadlines below) may be considered a fitness to practice issue.

August Elective survey for quarters 1 and 2 opens – students are sent the survey via email.

Deadlines
September 26 Submission of Scholarship Applications. To be eligible for a scholarship requires approval of your elective by your Elective Advisor.

November 30 1st quarter elective approval by Elective Advisors (via email) and application submitted on Via

December 16 Finalise travel arrangements, visa documentation, and insurance.

January 27 2nd quarter elective approval by Elective Advisors (via email) and application submitted on Via February 14 Finalise travel arrangements, visa documentation, and insurance.

March 30 3rd quarter elective approval by Elective Advisors (via email) and application submitted on Via

April 20 Finalise travel arrangements, visa documentation, and insurance.

June 30 4th quarter elective approval by Elective Advisors (via email) and application submitted on Via

July 20 Finalise travel arrangements, visa documentation, and insurance.

8.2 The Elective Survey

All Clinical Electives in DHB sites are arranged by site-coordinators at the 5 DHBs in the Auckland Medical Programme catchment and use the Elective Survey as guide for student’s’ placement preferences. **Students should not approach DHB clinical staff to arrange clinical elective placements.**

All Quarter 1 and 2 students will be surveyed in August in Year 5 for their elective preferences. Quarter 3 and 4 students will be surveyed in February of Year 6. Students should already have been in contact with their Elective Advisor to discuss their elective prior to the release of the survey.

Students will have the opportunity to indicate if they are preferencing a 10-week overseas elective, a split overseas elective and NZ DHB elective, DHB Clinical Elective, Research Elective, Research Project with Dissertation or a self-generated non-DHB elective and how many weeks they will need in NZ (note the Research Elective and the Research Project with Dissertation cannot be split).

Students will then identify 6 specialties they would prefer to be placed in and the site for each preference.

The survey will be open for 2 weeks and students’ surveyed preferences are final. Failure to complete the survey will result in site-coordinators placing you in any space that is available which may result in you being placed out of your cohort.

**DHB Electives during the Global Pandemic** – the current global pandemic has caused numerous disruptions to the Medical Programme with one of the most significant and ongoing effects being the exclusion of overseas travel for Electives. Where previously most students travelled internationally for electives, we have been accommodating most elective students in our DHBs over the past few years. This has placed immense strain on the system and site-coordinators have a difficult job managing elective placements alongside regular cohort attachments. With the resumption of the international electives, we have some uncertainty about numbers of students who will travel for electives and how much of their elective they will spend overseas this uncertainty makes it difficult for the Medical Programme to institute deadlines for elective placements in DHBs. Unfortunately, it is sometimes the case where a small number of students are still being placed in the final weeks before their Elective commences. If students are concerned about their placement, they should contact the Electives Administrator(Claudia.makgill@auckland.ac.nz) or their site-coordinator for more information.
8.3 Electives in the Otago Training Catchment

Electives in a DHB or other organisation located in the Otago Medical School’s training catchment are subject to approval by the Dean of the Otago Medical School.

Applications for electives in the Otago catchment will only be considered for extenuating circumstances and should be made, in the first instance, to either the Phase 3 Director or the Chair of the Electives Committee. If the student’s case for an Otago Elective is accepted by the Auckland Medical Programme, the student should submit an Otago Elective Application to Phase Director and/or Chair of the Electives Committee for submission to the Otago Medical School for their consideration. The Otago Elective Application Form can be obtained from the Electives Administrator (Claudia.makgill@auckland.ac.nz).

Students should not directly contact consultants in Otago teaching hospitals unless they have been granted the appropriate approval to do so.

8.4 Elective Approval and Confirmation

Clinical placements in DHBs are considered pre-approved with the expectation that students have already discussed their elective preferences with their Elective Advisor. Students do not need to go back to their Elective Advisor for approval of DHB clinical electives.

Self-generated non-DHB and overseas electives will need final approval from the student’s Elective Advisor (via email) a copy of which should be uploaded to the Via application.

Research Electives and Research Projects with Dissertation will need final approval from one of the Research Coordinators (Prof Cris Print, Prof Chris Bullen or Dr Judith McCool)

Final confirmation for all Electives is done through Via. Students can complete a Via application as soon as they have approved placements for the full elective period. Students can access Via at https://go.aucklandabroad.ac.nz/

The Via application is also where the student will identify the learning outcomes for the elective and upload their Elective Risk Assessment form and Pre-elective checklist.

All Elective students should complete an Elective Risk Assessment form and a Via application, regardless of the location of their elective.

8.5 Notes

1. At some institutions in the UK and USA, the process for final elective approval will not be complete until September-Jan of your TI year. In this situation you should still have made contact with a supervisor and will need to demonstrate that you have applied to the institution. Electives in these institutions cannot be approved for the first quarter, and it is risky to arrange such an elective for the second quarter in case you are not accepted.

2. **Placements in preferred services are not guaranteed.** The intention of the survey is to gather students’ preferences and, while site-coordinators do their best to accommodate individual wishes, it is not possible in every case.

3. **There is an expectation that students accept initial offers.** It is inevitable that some students will be offered DHB placements that are not one of their preferences. As disappointing as this may be, students should be aware that declining an offer will not result in a subsequent, more preferable offer being forthcoming.

4. **Acceptance of an Elective placement constitutes a professional commitment on the student’s part.** Withdrawal from an accepted DHB placement requires the approval of the Phase Director or Elective Coordinator and will only be approved under extenuating circumstances. Students withdrawing from confirmed placements damages our DHB relationships and compromises future possible placements.

5. Students should be aware that placements in the more popular services like ED, ICU, Anaesthetics, Radiology and Plastics are already very limited and it is impossible for sites to accommodate all students who preference these services.
6. Any changes to approved non-DHB electives must be resubmitted to your Elective Advisor to be re-approved. Please ensure that your supervisor(s) of cancelled electives are notified to avoid any inconvenience for them. This responsibility and courtesy is considered to be a fitness to practice issue.

7. All Year 6 students must be back in time for Clinical Imaging week which include the post-elective interviews and most cohort sites (or the start date of your next attachment in the case of Quarter 3).

8. You must not begin your elective until after the Year 5 Board of Examiners meeting held, in the last week of the standard University semester in early-November. Do not make travel arrangements to leave before this date.

9. **TRAVEL, INSURANCE and VISAs**

   The University of Auckland is offering free comprehensive international travel insurance to all outbound student travel registered and approved through 360 International prior to departure. It is required that all students taking part in an overseas elective submit the Student International Travel Registration Form to 360 International at least 2 weeks in advance of departure from New Zealand, for risk management purposes and to ensure that eligibility for the University’s travel insurance provision can be confirmed prior to travel. Note, students who elect to purchase their own travel insurance are still required to register travel via 360 International as well.

   **Student International Travel Registration Form Link**

   An elective carries different risks to recreational travel and therefore recreational travel insurance is unlikely to cover things incurred in a clinical work environment. Students doing international electives need to ensure that all risk needs are covered to the extent possible (even if they are doing elective in their home country), and that additional insurance coverage is sought for activities or conditions not covered under the University’s Premier Corporate Travel Insurance Policy.

   It is the student’s responsibility to arrange appropriate entry visas in adequate time before departure. Find out early what entry documentation is necessary as there may be time delays for issuing visas and some will require fees to be paid.

   **Note:** If travelling to South Africa for Elective, without a South African passport, you are now required to have a back-up Elective approved and in place. This is due to recent changes to and uncertainties with the South African visa process.

9.1 **University of Auckland Student International Travel Policy**

   The University now requires all students traveling overseas to abide by standards set for assuring safe student travel. As your travel may involve risks to your safety, you must plan how you will manage those risks. Your Elective Advisor will discuss this with you and provide information to assist you in planning your Elective placement.

   All students must familiarise themselves with the [Student travel considerations, risks and responsibilities](#) associated with international travel given the current international context.

   Once your Elective placement has been confirmed by the host site and your Elective Advisor, you should register your travel plans with the Ministry of Foreign Affairs and Trade (MFAT) on their Safe Travel link. All NZ citizens and permanent residents must register with MFAT. International students must register their travel plans with their embassy. This is not an arduous process.
The MFAT address is http://www.mfat.govt.nz. Click on the Travel Information and Visas link for the Safe Travel registration portal.

Please ensure you familiarise yourself with the policy before your meeting with your Elective Advisor.

9.2 Booking your Travel

It is a requirement of the elective that you book your travel arrangements with House of Travel Parnell, part of the Orbit World Travel Group, the University of Auckland’s Travel provider.

Why?

- Experienced, friendly multi lingual consultants including Mandarin
- 24/7 After hours assistance
- Access to the discounted University of Auckland rates
- Risk Management

Monica Sawant – Retail Manager
Email: monicas@hot.co.nz

House of travel are not currently conducting in-person consultations so students should email Monica to arrange a video interview if they want to talk to a travel consultant in person.

Note, when submitting your Student International Travel Registration Form, individual flight segments and accommodation details only need to be provided within the form for bookings made outside of Orbit.

9.3 Travel and Medical Insurance

Please read the University Student Activity Travel Insurance Terms & Conditions for a full list of eligibility requirements and conditions including declaring pre-existing medical conditions, length of cover, procedures and supporting insurance documents for the University’s Allianz Corporate Travel Insurance Policy (including 24hr/7days a week emergency assistance while abroad).

To qualify for the insurance, you need to:

1. Complete the Elective Approval Form in Via.
2. Complete the Student International Travel Registration Form as soon as travel bookings have been made, and at least two weeks prior to departure from New Zealand.
3. If you have a pre-existing condition, please refer to the Allianz statement on Pre-existing Medical Conditions.
4. If you are travelling to a high or extreme risk country, please contact the Risk Office for a copy FS-94 International travel request form and complete the high risk portion of the and email it back to riskoffice@auckland.ac.nz upon completion. Note: you must complete this form even if you are not travelling near the area of high/extreme risk. You also need to complete the form if you are transiting through or taking vacation days in a country of high/extreme risk. This includes countries such as Japan and India and other countries you may not think of as high risk. It is best to check the risk level for your countries here: https://www.safetravel.govt.nz/travel-advisory-risk-levels

If you meet all those criteria, you automatically come under the University’s corporate policy. If you need proof of your insurance to provide to your host institution, please contact 360 International at 360international@auckland.ac.nz to request this, after submitting your travel registration form.

As part of the University’s corporate insurance policy, you are covered for up to 14 days of associated holiday travel, and 90 total days. If you have more than 14 days of associated holiday travel overseas before or after your placement, or your total period of travel is more than 90 days, you will be advised of the total number of days for which you must remit
payment at a rate of NZ$4.95/day, upon submission of the Student International Travel Registration Form. Days in transit to/from your destination and holiday days taken in between your programme start/end dates (e.g. weekends, public holidays are covered within the University covered days and not considered additional personal days.

**Note:** Students going away on elective should also ensure they have home and/or contents insurance to cover burglary etc. for their New Zealand residence while away.

### 9.4 Indemnity Insurance

You should also check you have medical indemnity insurance in the country you are going to be staying in. All students from Year 3 onwards should already be a member of the Medical Protection Society (MPS). MPS provides free cover for medical students undertaking electives. A letter of confirmation should be requested by the student to give to their host institution. MPS can be contacted on 0800 2255677 or MPS@NZMA.ORG.NZ for more detailed information.

### 10 FINANCE: including SPONSORSHIPS, BURSARIES AND SCHOLARSHIPS

Financial assistance may normally be used to cover:

- Traveling expenses overseas or within New Zealand.
- Cost of equipment, stationery, mailing etc. likely to be incurred during the elective project.
- Subsistence allowance if the project involves additional living expenses.
- Course fees if these are more than $20.00

#### 10.1 The Application Process

The same application process applies for the WW Phillip's Bequest, New Zealand Medical Women’s Association (Auckland Branch) Elective Bursary, Newton Wickham Award.

The Elective Scholarship Application form can be obtained from Cecil or from the FMHS Student Centre at Grafton Campus. Your elective must have been approved by your Elective Advisor to be eligible. Submit your completed application to the FMHS Student Centre. You must use separate applications for each grant.

The Elective Scholarship Application form requires a detailed description of your proposed elective. It includes a section on the reasons for your elective choice and the potential benefits of your electives. The following also need to be attached:

- Elective Approval form
- Supervisor and/or Host Institution confirmation
- A statement of expenses

**Deadline for submission is 26 September 2023 of Year 5.**

Approval notification will occur in early October.

#### 10.2 Awards

**W W Phillipps Awards in Medicine**

The purpose of the Awards is to assist medical students in furthering their knowledge of a special aspect of medical education through elective study. Selection will be based on academic study shown by the past record of the applicant, the nature of the research proposed, and the likely contribution to medical progress which will result. To apply please go
New Zealand Medical Women’s Association Elective Award
The main purpose of the Award is to assist a final year woman medical student to undertake an elective that focuses on the health of women and children. Selection will be based on academic merit, financial hardship and the relevance of the proposed elective to the health of women and children.

Dr Newton Wickham CBE Elective Award in Pacific Island Health
The main purpose of the Award is to assist final year medical students undertaking an elective that focuses on Pacific Island health. Selection will be based on academic merit, the relevance of the proposed elective to Pacific Island health and the likely contribution to medical progress that will result.

Flavell Bequest:
Provides a sum of £2000 each for 2 Barts/London students to exchange with 1 student from University of Otago Medical School and 1 from The University of Auckland Medical School to undertake an elective at one of the approved London Hospitals – Barts and The London, Queen Mary’s School of Medicine and Dentistry and University of London.

For more information on all the above University of Auckland FMHS elective scholarships contact the Student Services Centre fmhs@auckland.ac.nz

The Prime Ministers ASEAN Scholarship
The Prime Ministers ASEAN Scholarship can cover accommodation, living and travel expenses in target Asian countries. There are two application rounds in March and September for each year. Refer to: http://www.enz.govt.nz/how-we-work/scholarships/pmsa

Other Sources of Finance
Depending on the specific field of work to be covered in your elective, other Foundations and Organisations may be able to provide financial assistance. Use your imagination and approach them e.g. Service Clubs, health support groups, local authority "Scholarships" for residents.

11 ETHICAL AND PROFESSIONAL EXPECTATIONS OF MEDICAL STUDENTS ON ELECTIVES
The opportunity to undertake an elective is an exciting component of your medical training. Obviously, the context is important in terms of the kinds of challenges you are likely to face. Regardless of where you undertake your elective, a number of ethical and professional challenges may arise. Some of the challenges (both professional and ethical) that may arise during your elective:

- The assumption from host sites that your levels of knowledge and skills proficiency are higher than you actually possess. This may also happen in NZ. Some countries may have a very poor (or no) understanding of medical education in NZ (and elsewhere), not realising that in NZ medical students cannot diagnose, treat or prescribe without adequate supervision from a qualified practitioner. Patients in other countries have a right to be informed that you are not fully qualified.
• The expectation from patients that ‘because you are a westerner’ or ‘because you have trained in a western country’ you will be able to help
• Being given experiences that exceed your level of training – perhaps without adequate supervision. For instance, being expected to run and take responsibility for a clinic or a ward
• Inadequate resourcing of health care provisions. Feeling overwhelmed by the poverty you see. Uncertainty about how best to help your patients. For instance, wondering whether you should pay for things out of your own pocket
• Responding to an emergency: In the absence of suitably qualified staff, be extremely cautious in intervening. Don’t intervene where you think you may make matters worse. However, if there is a reasonable likelihood that you can improve outcomes or prevent or mitigate serious harm, then it may be appropriate to assist. Try to document what happened and what you did as soon as possible after your involvement
• Witnessing another elective student ‘having a go’ at a procedure that they would not be allowed to carry out at home without supervision (for instance a spinal tap – LP)
• Feeling discomfort about what you can actually offer. In a study by Elit et al, they found some elective students were troubled by the resources that were diverted from patients to them (time to explain, teach, supervise, and translate – less time with patients). Supporting the elective experience does place an additional administrative burden on health systems that are already stretched.

“We’re not volunteers, we’re medical students and I think we all went in realising that we’re going for a learning experience and we’re taking more out of it than we can probably give back”

It is important to remember that you are a medical student and not (yet) professionally qualified. The following guidelines apply regardless of where you undertake your elective. You:

• have a duty to identify yourself to your patients and to make sure (to the best of your ability) that your patients know you are a student doctor
• should clearly explain to patients what your involvement in their care will entail. Patients have a right to refuse to be examined or to submit to a procedure
• must ensure that where there is an indication for a sensitive examination, a qualified doctor or midwife is present. Ideally a female chaperone must be present when a sensitive examination is carried out on female patients (see The Medical Programme Policy Guide, pp 14-15)
• ‘Written informed consent must be obtained before premedication for any procedure or examination that you will perform whilst the patient is under anaesthesia or sedation’ (see The Medical Programme Policy Guide, pp 36-41)
• must get the written consent of any patient whose photo(s) or medical information is identified and used by you (by way of a report or presentation)
• must keep a patient’s personal information confidential (unless you have their written consent to use such information)
• should respect cultural differences in any decision-making process. This may entail the involvement of family members or community/spiritual elders.

If you are placed in a situation where you are concerned about what is expected of you (in terms of your role as a student doctor), or the behaviour or competency of a peer or senior colleague, in the first instance speak to your supervisor. It may also be appropriate to speak to peers who are also concerned about the situation at hand: talking to your supervisor together will give you all support. If the supervisor is the problem, there may be someone else whom you trust and who may be able to offer help and support. It is also important that your elective report include details about any concerns you had whilst undertaking your elective. You are also encouraged to discuss your concerns with your Elective Advisor.

You may be invited or expected to participate in activities that you consider to be unethical or unprofessional, but that your hosts do not view as problematic or troubling. Although we
recognise this is difficult territory, “you should politely but firmly decline. It is recognised that speaking out can be very difficult, especially as a student, however it is important to speak up when you encounter ethical problems and concerns. Change cannot happen if you remain silent on important and potentially serious matters that concern you and your patients.

Please familiarise yourself with the following resources. They give additional information on what is expected of you in your role as a student doctor, as well as being informative about the Elective process:

- The Medical Programme Policy Guides (MPD)
- Editorial. ‘What should you do when you see a fellow student behaving inappropriately?’ BMJ (2009):338;204-207
- Banatvala, N and Doyal, L. Knowing when to say “no” on the student elective. BMJ (1998):316;1404-1405

12 GRADING SYSTEM FOR ELECTIVE

You must pass the elective to pass the final year of your qualification. A satisfactory Elective Report must be submitted before the end of the elective attachment. Both the report and the CSR must be submitted online via CANVAS.

The Elective Committee will use the following grades for assessing your elective:

- Distinction
- Pass
- Fail

The achievement of distinction is characterised by the following criteria. Most, but not all criteria must be achieved:

- The Elective Report is submitted by the deadline (midnight, last day of elective)
- Demonstration of an excellent knowledge of medical practice/research in the student’s chosen area.
- Excellent work effort and exceptional involvement in clinical practice or research.
- Acquisition of in depth understanding of professional cultural and social issues relevant to their medical elective experience.
- Development of exceptional procedural/surgical skills during elective.
- A comprehensive, in-depth excellent quality elective report from the student.
- Confirmation from the supervisor of excellence in almost all areas (>80% excellent).
- Demonstration of excellent professionalism and communication skills during Elective placement and post-elective interview.
- Demonstration of excellent professionalism and communication skills during pre-Elective planning with Elective Advisor, rated on a scale of 1-4 (1 being minimal level of professionalism’). This will be submitted to the post-elective interview panel for consideration.

A distinction grade will not be considered unless your Elective Report is received by the due date.

The achievement of pass is characterised by the following criteria:

- Demonstration of adequate attendance.
- Satisfactory participation in the activities of the Supervisor’s team or unit (clinical or research).
• Demonstration of learning medical, surgical, procedural or research skills during the elective.
• Demonstration of an appreciation of professional, cultural and social issues relevant to their medical elective experience.
• A satisfactory quality elective report from the student
• Satisfactory Supervisor’s report.

The grade of fail is characterised by the following criteria. Any of these criteria may result in a fail:

• Absent from the elective interview without due cause.
• Failed to demonstrate that adequate time had been spent on the elective.
• Failed to submit an elective report.
• Submitted an inadequate report.
• Supervisor has serious concerns about student’s performance. Before failing a student on these grounds, the supervisor will be contacted to discuss the student’s performance.

The Committee's grading of your elective will be made following the interview and consideration of your supervisor’s report. A provisional grade will be sent to the Board of Examiners.

13 ELECTIVE REPORT

There are two occasions on which you are given the opportunity to report back to your colleagues concerning your elective experience.

13.1 Elective Report

This is a formal account of your elective experience required as a condition of your qualification. You are advised to write your report no later than the last week of your elective. Many students keep a diary while they are away detailing their experiences throughout the placement.

Your report will be loaded on the Elective Report Database accessed via the MBChB Portal. It should be written with this in mind i.e. in a professional manner. The report should be 10 pages, including a 200-word abstract. Please complete the Post-Elective Student Evaluation and Recommendation Form. Appendices may be attached.

The report should give a concise account of what you did, whether you achieved your goals and emphasize the highlights of the elective. It should be reflective of your medical experiences, providing details of practical knowledge gained and lessons learnt, using the domains of the medical programme as subheadings*. It is not a Lonely Planet travel guide. Sometimes interesting case histories may be included. If you have carried out a project, the write-up of this should be in the form of an appendix (including tentative or conclusive findings) attached to the elective report. Data on social activities, accommodation and useful advice of interest to other students can be placed in an appendix. Comments, criticisms or recommendations which you feel may assist future elective students would be welcomed.

Your report must be submitted by Midnight on the last Friday of your Elective and submitted via Canvas.

This is an important deadline for two reasons. The Elective Committee has to assess it prior to the Elective Interview (see section 10.2) which you attend with them on a date during Medical Imaging week (to be advised) and for your report to be considered for a Distinction (see section 9).

• Clinical and Communication Skills domain: You may find that aspects of this domain are different in the setting of your elective. Take this opportunity to reflect on these and compare and contrast your experiences on elective with those you have experienced so far.
• **Personal and Professional Skills domain:** It is highly likely that you may encounter some personal and professional challenges during your elective as you will be working in an unfamiliar environment that may be outside your usual experience. This is a good opportunity to develop some insight into how you respond in different situations. You will be expected to reflect on the three PPS components included on the Elective CSR i.e. Professional Qualities; Engagement in Team; and Health and Wellbeing. You may wish to include this content in your PPS portfolio.

• **Applied Science for Medicine domain:** You may wish to reflect on the development of your knowledge in this area and/or the differences that exist between your experiences on elective and so far in your training.

• **Hauora Maori domain:** Please reflect on the listed components of this domain. On those electives overseas use this opportunity to reflect on cultural/ethnic differences appropriate to you setting.

Students who are working in a country where there are indigenous populations should critically reflect on the differential status, or otherwise of indigenous populations health status. In addition, students should reflect on the historical, political or other determinants of these inequalities and how they are being addressed, or otherwise, in the host institution (e.g. are there specific policies, practices and ethical considerations for how indigenous populations are managed). Provide concrete examples if possible. Reflect on how these issues are managed in the New Zealand healthcare context.

• **Population Health:** Please use this opportunity to comment on disease prevention and health promotion as relevant to your elective.

Students need to provide a profile of their host country burden of disease (morbidity and mortality risk factors) and reflect on how this is represented, or otherwise within their host medical / healthcare clinic. What are the emerging concerns for the country and the health care system (workforce retention etc.)?

Students need to provide evidence of their reflection on the broader social, cultural, economic and where relevant political drivers that underpin the health system of their host country. Where possible, students should present concrete examples of how these factors influence patient presentation and health provider responses.

Students should reflect on how the above dynamics are expressed in New Zealand and where the differences and commonalities lie. What are the key learning / messages that capture this experience?

### 13.2 Elective Interview

• A formal 15-minute interview with members of the Electives Committee at the end of your elective attachment. In regard to Year 6 students allocated to Waikato, Rotorua, Tauranga, Whangarei and New Plymouth, your interviews will be held on site by local Academic staff.

• The place, date and time for this interview (held during clinical imaging week) will be emailed to you prior to the aforementioned week. Your Supervisor will be required to submit a report on your elective for consideration by the Committee.

### 13.3 Format for the setting out of your report

• A template for the report that includes the Post-Elective Student Evaluation and Recommendation Form will be available on Canvas.

• This report must be produced using Microsoft Word document. Pdf copies will not be accepted.
REMINDER: The completed report must be submitted to CANVAS no later than Friday on the last day of the Elective.

You are reminded that Qualification is dependent on the completion of a satisfactory elective and report by the specified date.
